

Weill Cornell Medical College
575 Lexington Ave
New York, New York 10022

December 29, 20XX

Dear Dr. Feinstein:

Please accept my application for consideration for the Research Aide or Research Tech position within the Rehabilitation Medicine department of Weill Cornell Medical College. The coursework I've completed at William & Mary through the Neuroscience curriculum, as well as my personal experience with laboratory research, and my clinical experience as an emergency medical scribe has keenly developed my interest for a future within the healthcare research community, particularly at Weill Cornell Medical College. The Research Aide and Research Tech positions offer a direct connection between scientific scholarship and clinic practice - I believe my academic history and personal experiences create an effective match.

The independent behavioral neuroscience research I have been conducting for seven semesters with rat models has uniquely prepared me for these positions. I've learned how to conduct literature searches, handle lab animals, pose testable hypotheses, collect data, and evaluate empirical results using SSPC and MATLAB. I have also learned how to determine conclusions, write concisely, and deliver presentations. Working closely with my Honors advisor has allowed me a more comprehensive understanding of the scientific method than could be provided in any classroom, and I would look forward to being able to foster my intellectual curiosity further at Weill Cornell Medical College – an institution that is continually at the forefront of healthcare research.

I also offer the unique experience of currently being employed 30 hours per week as a medical scribe in the Emergency Department of Riverside Doctors' Hospital. As a scribe, I follow the Emergency Physician into the exam room and chart the patient's electronic medical record in real-time as the physician gives the physical exam. From this position, I have gained extensive insight into clinic practice and fluency in medical terminology. I have been able to work with ten different physicians and have witnessed innumerable hours of physician-patient interaction. Part of the job description states having to conduct phone interviews and testing with human subjects. Because of my in-depth experience in a clinical setting, I believe I would be aptly prepared for this type of interaction.

I look forward to the opportunity to speak with you further about the two research positions available. I believe my balance of work experience, research, and a strong academic record has developed not only skills in research procedure and clinical application, but also a strong work ethic, which fits well with the criteria sought in candidates for the positions. If you need any further information, please contact me at 123-555-4321 or tmoore25@email.wm.edu. Thank you for your time and consideration.

Sincerely,

Theresa Moore
