Dear Hiring Team,

I am writing to express my interest in the Data and AI Analyst position at Accenture Federal Services. Throughout my academic journey, I have geared myself towards building a strong foundation in artificial intelligence, data analysis, and machine learning, and in my ability to best relay that information to others through hands-on projects like developing AI-powered computer vision, making hackathon multimodal radio frequency detection programs, and creating convolutional neural networks using Python, C++, and High-Performance Computing (HPC) clusters.

Prior to attending William & Mary, I knew that I wanted to double major in Engineering Physics and Philosophy for this reason. By doing this, I gained the ability to think both critically and analytically to solve problems that demanded creative and innovative solutions. One such problem was the needed revival of the William & Mary Robotics Club. Until my year, there were no members of the club, but with my technical interests, I made efforts to improve the club's standing with the university despite not knowing much about the topic at the time. I gathered a team, and through our efforts of connecting with sponsors, creating workshops, and hosting events such as the William & Mary Hackathon and TechFusion, I was able to create an organizational system that will live well beyond my college years.

In addition to this, I was able to connect with Accenture on multiple occasions at the Hackathon and during external career events. Since the beginning of that journey, two of our graduated William & Mary Robotics Club seniors have committed to and been accepted into Accenture. After talking with them more about how their lives have changed within the company, I knew I had to make an effort to be a part of that world. I made a switch and joined the William & Mary Data Science Society, and after immersing myself in the field and its applications, I decided to try the role of President within the organization so I could better learn all I can through teaching and connecting students, just as I did with the William & Mary Robotics Club. I created workshops on Data in High-Performance Computing (HPC), Computer Vision, Tableau, Kaggle, Power BI, SQL, and many other tools that would best help myself and the members succeed in the future.

By joining Accenture, I hope to take this learning journey further. The opportunity to join the Analyst Development Program and receive structured training in AI engineering and cloud analytics is precisely the career path I am determined to follow. I am most definitely eager to make use of the skills I now have and to learn more to share.

Thank you for your consideration, and I look forward to discussing how I can contribute to moving missions forward at Accenture Federal Services.

Sincerely,
Emmanuel Sampson
